### Call for feedback on the Platform on Sustainable Finance's draft proposal for an extended taxonomy to support economic transition

Fields marked with \* are mandatory.

### Introduction

### **Disclaimer:**

This call for feedback is part of ongoing work by the <u>Platform on Sustainable Finance</u>, which was set up by the Commission to provide advice on the further development of the EU taxonomy framework.

This feedback process is not an official Commission consultation. The draft report produced by the Platform is not an official Commission document. Nothing in this feedback process commits the Commission nor does it preclude any policy outcomes.

In March 2018 the Commission published its <u>action plan: financing sustainable growth</u>, based on the advice of the <u>High Level Expert Group (HLEG)</u>. Action 1 of the Commission's action plan calls for the establishment of an EU classification system for sustainable activities, or taxonomy. The Commission followed through on this action by proposing a regulation for such a taxonomy. The <u>Taxonomy Regulation</u> was adopted by the co-legislators in June 2020. It establishes the basis for the <u>EU taxonomy</u> by setting out 4 overarching conditions that an economic activity has to meet in order to qualify as making a substantial contribution to environmental objectives.

Development of the EU taxonomy relies on extensive input from experts from across the economy and civil society. The <u>Platform on Sustainable Finance</u> plays a key role in enabling such cooperation by bringing together the best expertise on sustainability from the corporate and public sector, from industry as well as academia, civil society and the financial industry join forces.

As a permanent expert group of the Commission that has been established under Article 20 of the Taxonomy Regulation, the Platform has been tasked to advise the Commission on further developing the EU taxonomy, improving its usability and exploring its expansion to social objectives, activities that significantly harm environmental sustainability or activities that have no significant impact on environmental sustainability.

In October 2020, the Commission established the Platform with five working groups, including the <u>subgroup on</u> <u>negative and low impact activities</u>. The subgroup has been tasked to advise the Commission on the development of the taxonomy with regard to economic activities that do not have a significant impact on environmental sustainability and economic activities that significantly harm environmental sustainability.

The environmental challenges we face put an immense task ahead of us: to transition to a low carbon, climate-resilient, and environmentally sustainable economy. The aim of sustainable finance policies is to help all economic actors navigate that transition with the urgency needed to avoid risks and meet climate and environmental goals.

The EU taxonomy creates a common definition and gives recognition to economic activities that make a substantial contribution to an environmental objective, while not doing significant harm to any other environmental objective and meeting minimum social safeguards. In this setting, the taxonomy framework already defines levels of 'significant harm'. Co-legislators mandated the Commission to explore whether this framework could be extended to further categories of environmental performance: activities that do significant harm and activities with no significant impact.

There are many ways in which the taxonomy framework could be extended. Those that make a substantial contribution without undermining any of the goals and while ensuring they are socially sustainable, are already recognised, as the transition could not succeed without having a lot more of such green activities. But a successful transition also means that actors that do not make a substantial contribution can also start and continue their transition, including taking valid and robust interim steps towards sustainability. The objective of this analysis is to explore how an extended taxonomy could help economic actors on this urgent environmental transition pathway, irrespective of what level of environmental performance they start from.

On 12 July 2021, the Platform published its <u>first draft proposal for an extended taxonomy to support economic transition</u>. The report explores the main considerations behind the questions of this consultation. You are kindly invited to read that report before filling in this questionnaire.

### Call for feedback

The Platform is inviting stakeholders to provide feedback on the draft report through this online questionnaire.

The deadline for providing feedback is Friday 27 August close of business.

In the online questionnaire, you will be asked to comment on certain aspects of the report and make suggestions.

### **Next steps**

The Platform is still working on some important aspects of these questions and will proceed to develop its final report and final recommendations after considering the stakeholder input collected through this call for feedback.

The Platform will submit the final report with their advice to the Commission in autumn 2021. The Commission will analyse and consider the report in view of the continuous developing of the EU taxonomy, as anticipated in the new <u>sust</u> <u>ainable finance strategy</u>.

By the end of 2021, the Commission will publish a report on the provisions required for a social taxonomy, as required by the Taxonomy Regulation.

Please note: In order to ensure a fair and transparent consultation process only responses received through our online questionnaire will be taken into account and included in the report summarising the responses. Should you have a problem completing this questionnaire or if you require particular assistance, please contact <a href="mailto:fisma-platform-sf@ec.europa.eu">fisma-platform-sf@ec.europa.eu</a>.

6

The Commission will publish the responses to this public consultation. You can choose whether you would like your details to be made public or to remain anonymous.

- Yes, I agree to my responses being published under the name I indicate ( name of your organisation/company/public authority or your name if your reply as an individual – your email address will never be published)
- No, I do not want my response to be published
- I agree with the personal data protection provisions

### Your opinion

Question 1. Which environmental performance levels should the taxonomy distinguish, with a view to help the environmental transition?

### Please select all of those that you would prioritise:

Please select as many answers as you like

- Substantial contribution
- Intermediate performance
- Significantly harmful but can improve to sustainability
- Significantly harmful but can improve not to do significant harm
- Significantly harmful but cannot improve sufficiently to avoid doing no significant harm
- No significant impact

Question 2. How could policies ensure that recognising the transition from significantly harmful to intermediate performance will not slow down the transition to green activities (that evidence shows we need to accelerate)?

### Please select all that you agree with:

Please select as many answers as you like

- Not relevant
- Distinguish different levels of environmental performance clearly throughout the taxonomy and in other instruments

Recognise only improvements from and to a well-defined level of
environmental performance, rather than recognising activities sitting in a given
level of performance below substantial contribution
Require continued improvement beyond the relevant investment plan
Require associated entity level transition strategy to understand the credibility of the intermediate transition.
Recognise multiple ways of transition depending on type of Technical Screening Criteria.
Other safeguards would be needed
Question 3. Do you consider that recognising/naming the significant harm
performance level would be important?
© Yes
No
Don't know / no opinion / not applicable
Significantly harmful' taxonomy
Question 4. In your view what would be the advantages and disadvantages of a 'significantly harmful' axonomy as designed by the Platform (i.e. accompanied by an assessment of the existing and needed EU policy and legislative initiatives aimed at incentivising finance for urgent transition away from significantly harmful activities, for building climate-resilience and to support greening of the whole economy)?
Advantages – a 'significantly harmful' taxonomy would:
Please select as many answers as you like
increase the transparency of environmental performance levels of activities improve the communication of transitions and transition plans on activity level
help companies to develop strategies and investment plans for moving away from significantly harmful performance levels and meeting environmental objectives
help markets define and develop instruments for financing the transition
enhance risk management frameworks
help policymakers to provide subsidies for decommissioning
other

Please elaborate on your answer on the **advantages** of a 'significantly harmful' taxonomy. Could advantages be further enhanced? If so how?

IOGP does not see any advantages of a 'significantly harmful' (SH) taxonomy.

### **Disadvantages** – a 'significantly harmful' taxonomy would:

Please select as many answers as you like

- be a departure from the positive spirit of the green taxonomy
- negatively impact the ability of companies to raise finance for transition
- accelerate transition risks and risks creating "stranded asset by legislation"
- negatively impact banks with high shares of lending to certain companies both among retail customers and on the wholesale markets
- disadvantage EU companies vs non-EU jurisdiction
- increase complexity, reporting burden and affect usability of the taxonomy
- other

## Please elaborate on your answer on the **disadvantages** of a 'significantly harmful' taxonomy. How could they be addressed?

1000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

The Commission's original, positive approach to developing a taxonomy aimed to encourage all sectors to participate in the transition towards net zero. Such taxonomy should be technology neutral and focus on facilitating investments that improve environmental performance. A SH taxonomy would instead take a counter-productive, punitive approach which could have unforeseen consequences. Economic activities and technologies, potentially including those that could support the transition, could get stigmatized, leading to significant socio-economic changes and irreversible changes to an economy where new and upcoming developments would not be able to be integrated. IOGP therefore strongly supports an impact assessment of a potential extended taxonomy. We are also concerned about increased complexity and are concerned the nuance between the two types of SH activities, those that can transition and those the Platform considers cannot (Art. 19(3)), will be lost on users in practice.

### Two types of significantly harmful activities

The report distinguishes two types of significantly harmful activities

- those that are 'always significantly harmful' (no technical option to transition to an environmental performance not causing significant harm)
- and those that can transition out of causing significant harm

### Question 5. Do you agree with the following statements?

### Please check all boxes that you agree with:

Please select as many answers as you like

Always significantly harmful activities should be distinguished from those activities that have a potential to transition out of significant harm
 Criteria should be added under the green taxonomy to recognise as green the closure / decommissioning for such always significantly harmful activities
 Mandatory reporting on turnover from and capex/opex related to always significantly harmful activities should be introduced

### Question 6. Do you consider recognising/naming the intermediate performance level useful to encourage mitigating significant harm?

- Yes
- No
- Don't know / no opinion / not applicable

### Please explain your answer to question 6:

1000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

IOGP welcomes the renewed emphasis on transition. The recognition of CapEX to transition to what is called 'intermediary performance' (IP) is a positive development. However, while IOGP sees value in the creation of an intermediary space, the current approach limiting IP to the space between DNSH and SC risks not covering all activities/technologies that can contribute to the energy transition. Moreover, not all DNSH criteria from the TSC seem suitable to be used in the proposed 'boundary approach'. IOGP believes the upcoming complementary delegated act on transitional activities (incl. gas) should be adopted before any other initiatives regarding a space for transitional activities should be considered. Also, it is recommended to first see how reporting on the current taxonomy plays out, taking into account the complexity of the reporting and range of topics that still remain unclear.

Question 7. For activities that are in the intermediate performance space (in between significant harm and substantial contribution):

- a) should all turnover from such activities be recognised as **intermediate turnover**, and all opex as **intermediate opex**?
  - Yes
  - No
  - Don't know / no opinion / not applicable

### Please explain your answer to question 7. a):

b) should all capex be recognised as 'Intermediate capex' irrespective of whether or not it improves environmental performance of the activity and by how much?  Yes No Don't know / no opinion / not applicable  Please explain your answer to question 7. b):  1000 character(s) maximum including spaces and line breaks, i.e. stricter than the MS Word characters counting method.  Intermediate transition  The report recommends to recognise 'intermediate transition', differentiated from green transition.  Question 8. What do you think are the essential conditions for recognising such intermediate transitions for activities that can make a substantial contribution to the given environmental objective:  Please select as many answers as you like  a) that the activity reaches the intermediate performance level, in other words does not do significant harm to that particular environmental objective  b) in addition, that the activity continues to improve its environmental performance in order to stay in that intermediate performance level and not to do significant harm even if in the future the criteria are tightened.  c) in addition, that the activity continues to improve its environmental performance in order to reach substantial contribution (green) in the future	including spaces and line breaks, i.e. stricter than the MS Word characters counting method.	
whether or not it improves environmental performance of the activity and by how much?  Yes No Don't know / no opinion / not applicable  Please explain your answer to question 7. b):  1000 character(s) maximum including spaces and line breaks, i.e. stricter than the MS Word characters counting method.  Intermediate transition  The report recommends to recognise 'intermediate transition', differentiated from green transition.  Question 8. What do you think are the essential conditions for recognising such intermediate transitions for activities that can make a substantial contribution to the given environmental objective:  Please select as many answers as you like  a) that the activity reaches the intermediate performance level, in other words does not do significant harm to that particular environmental objective  b) in addition, that the activity continues to improve its environmental performance in order to stay in that intermediate performance level and not to do significant harm even if in the future the criteria are tightened.  c) in addition, that the activity continues to improve its environmental		
whether or not it improves environmental performance of the activity and by how much?  Yes No Don't know / no opinion / not applicable  Please explain your answer to question 7. b):  1000 character(s) maximum including spaces and line breaks, i.e. stricter than the MS Word characters counting method.  Intermediate transition  The report recommends to recognise 'intermediate transition', differentiated from green transition.  Question 8. performance in order to reach substantial contribution (green) in the future		not to
	c) in addition, that the activity continues to improve its environmental	

- d) in addition, that the activity does no significant harm to other environmental objectives
- e) in addition, that the activity does no significant harm to any of the other environmental objectives, with the exception of adaptation (because failing to meet the do no significant harm criteria to adaptation means only a harm on the activity itself)

# Question 9. Do you have other suggestions for extending the taxonomy framework for significantly harmful activities, intermediate performance, intermediate transition?

1000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

The taxonomy should adhere to the principle of technological neutrality and must allow for multiple transition pathways. Irreversible and regrettable changes to the economy which could make it impossible to integrate future technological developments should be avoided. A SH taxonomy risks making transition pathways too restrictive and rigid, making it harder for companies to attract sustainable finance for their transition efforts. IOGP believes this would go against the taxonomy's intent, could have a negative impact on the EU's climate objectives and would likely translate in higher costs for consumers. We believe there is no need for a SH taxonomy as the 'green' taxonomy has the potential to provide the right direction of travel (e.g. through CapEx), when further strengthened with a complementary delegated act incl. transitional activities.

### 'No significant (environmental) impact' taxonomy

Question 10. In your view what would be the advantages and disadvantages of a 'no significant (environmental) impact' taxonomy?

Check all that apply and add anything you think is missing:

Please select as many answers as you like

### **Advantages** – a 'no significant environmental impact' taxonomy would:

help the ESG analysis
be beneficial for SME's to access finance
be beneficial for SME's to access green finance (if it can allow for / incentivise
greening even within the NSI space, where there is such possibility)
ensure banks can report green lending to SMEs and continue to develop
these markets
allow easier access to finance for larger companies in these sectors
other

## Please elaborate on your answer on the **advantages** of a 'no significant (environmental) impact' taxonomy. Could advantages be further enhanced? If so how?

1000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

IOGP acknowledges the concern about investors misunderstanding the 'green' taxonomy. Indeed, the 'green' taxonomy is not binary and economic activities that are not taxonomy aligned are not harmful per definition. However, IOGP does not believe the introduction of a NSI taxonomy helps to alleviate these concerns. To the contrary, we believe adding any extra layers of complexity will only make it more difficult to both report on and understand taxonomy data. We also do not think the NSI category is the best policy tool to help non-taxonomy-eligible sectors attract sustainable finance.

### **Disadvantages** – a 'no significant environmental impact' taxonomy would:

Please select as many answers as you like

- be too complex to manage, as a framework
- imply burdensome reporting obligations
- risk disadvantaging 'no significant impact activities' vis-à-vis intermediate contribution activities that are likely to be more polluting
- other

## Please elaborate on your answer on the **disadvantages** of a 'no significant (environmental) impact' taxonomy. How could they be addressed?

1000 character(s) maximum

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

The introduction of new reporting requirements like a NSI taxonomy will increase complexity and harm the usability of the taxonomy for investors, which it is supposed to increase. From a reporting perspective, systems will have to undergo structural changes and personnel will have to be (re-) trained. Complexity will already increase with the introduction of additional environmental objectives. Introducing a NSI taxonomy would place an even bigger burden on companies. Furthermore, the practical development and implementation of a NSI extension will be a huge challenge. In essence, all economic activities will have to be defined and then checked against different environmental objectives. Even if feasible, the increase in complexity and reporting burden is not justified by the benefits such an extension would bring. Lastly, a taxonomy that would become too complex or unworkable runs the risk of the financial sector resorting to other tools.

### Question 11. Can you give examples of activities which you think would be considered as NSI?

1000	charact	or(c)	maximul	m

including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

Question 12. If there was to be an extension of the taxonomy to address NSI activities, should it be a requirement for companies or investors wishing to report activities under the NSI taxonomy to first participate in an environmental labelling or certification scheme (such as <a href="EMAS">EMAS</a> ) to validate minimum levels of environmental performance? <a href="Performance">Yes, reporting of activities should stay voluntary but conditional upon such a</a>
<ul> <li>certification/labelling</li> <li>No, reporting of activities should stay voluntary but there should not be any certification/labelling as a condition</li> <li>Don't know / no opinion / not applicable</li> </ul>
Please explain your answer to question 12:  1000 character(s) maximum  including spaces and line breaks, i.e. stricter than the MS Word characters counting method.
Question 13. Do you consider it would be helpful if the Platform prepared non-binding guidance on NSI activities which could be published by the Commission for voluntary use by taxonomy users?
<ul><li>No</li><li>Don't know / no opinion / not applicable</li></ul>
Question 14. Are you in favour of a phased approach where NSI could be recognised as a generic category (through guidance) without L1 change?  Output  Output

Don't know / no opinion / not applicable Please explain your answer to question 14: 1000 character(s) maximum including spaces and line breaks, i.e. stricter than the MS Word characters counting method. Question 15. Prior to any L1 change (if at all), do you consider that the Platform should recommend to include some NSI activities in the taxonomy by e.g. creating a generic category for 'green' service providers under the adaptation or other objectives? Yes O No Don't know / no opinion / not applicable Please explain your answer to question 15: 1000 character(s) maximum including spaces and line breaks, i.e. stricter than the MS Word characters counting method.

### **Additional information**

Should you wish to provide additional information (e.g. a position paper, report) or raise specific points not covered by the questionnaire, you can upload your additional document(s) below. Please make sure you do not include any personal data in the file you upload if you want to remain anonymous.

The maximum file size is 1 MB.

You can upload several files.

Only files of the type pdf,txt,doc,docx,odt,rtf are allowed
